# GREEN & GORGEOUS

 Who knew that recycled materials could be so beautiful? These manufacturers did. Check out a few of their earthy and earth-friendly options for your next upgrade.

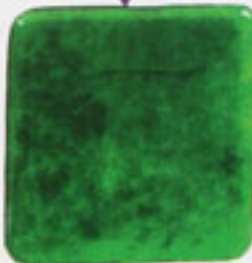

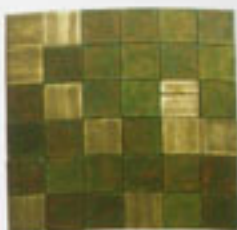

## Sparkling Green

Most recycled glass tiles have a distinctive, hand-crafted look that adds depth. Check the recycled content: each year, Oceanside Glasstile uses nearly 2 million pounds of curbside recycled glass and abundant silica sand. It also offers distinctive patterns, such as Non-Indescent Aqua (**top left**), and colors, including the cool brown-green of Indescent Olive (**top right**) tiles. ([glasstile.com](http://glasstile.com))

## 100% Earth-Safe

Bedrock Industries uses 100 percent post-consumer and post-industrial glass with no added oxides or colorants to make BlazeStone Tiles. The company's dedication to green doesn't stop there: Shipping materials and packages are made from recycled materials, too. Check out rich and glossy Grass Water Color and Meadow Glossy (**below**). ([bedrockindustries.com](http://bedrockindustries.com))

## One-Stop Shop

Eco-Friendly Flooring transforms construction-site glass waste into a rainbow of durable glass tile options for backsplashes, bath surfaces and more. Colors include sunny Granny Smith 5, **above**. For a cool foil against wood cabinetry, check out 100 percent recycled brass (**top**) or aluminum tile. ([ecofriendlyflooring.com](http://ecofriendlyflooring.com))

## Made by Hand

Stardust Glass hand makes each tile using 87 to 100 percent post-industrial glass. ([stardustglasstile.com](http://stardustglasstile.com))

4

Number of hours that a 100-watt lightbulb can run on the energy saved from recycling one glass bottle.
